Summary

Software developer studying at Scaler Academy, focused on Data Structures, Algorithms, and Full Stack Development. Built five production-grade projects spanning geospatial systems, agentic document processing, and endpoint security tooling, using React Native, Go, Node.js, PostgreSQL, and Docker.

Skills

Frontend: React, React Native, Expo, HTML, CSS, JavaScript

Backend: Node.js, Express.js, GoLang, LangGraph, Python

Databases: PostgreSQL, PostGIS, MongoDB, MySQL

Tools: Git, GitHub, Docker, Postman, Cloudinary, Linux

Core Concepts: Data Structures and Algorithms, REST APIs, Geospatial Systems, Agentic Systems

Projects

Loan File Intelligence System

github.com/commonrover64/doctask-siddhartha-rampal-singh

Stack: LangGraph, Python

- Agentic document processing system built for SuperDocs's founding engineer selection task, using the freelance/vendor domain to reinforce a parallel task.
- Designed an agentic pipeline using LangGraph to validate loan files end to end.
- Uncovered two SuperDocs API bugs: silent field-fill skipping and session context degradation across approval rounds. Built a completionValidator and bluffDetector to guard against them.

Freelancer Engagement and Billing Bundle

github.com/commonrover64/superdocs-builds

Stack: Node.js, Express, React, PostgreSQL

- Full stack app for freelancer engagement and billing, built for the same SuperDocs selection process.
- Built a Node and Express backend with a React and Vite frontend, integrated with the SuperDocs API for automated document generation.
- Submitted as an open source use case to superdocsapp/superdocs-builds. PR currently under review.

Guardian

github.com/commonrover64/guardian

Stack: Python, eBPF, BCC

- Endpoint detection and response (EDR) tool for monitoring Linux process activity.
- Built a Linux process monitoring tool with a /proc based polling scanner for endpoint activity.
- Extended with eBPF via BCC, running as a parallel thread to catch short lived processes and track exec chains for LOLBin detection mapped to MITRE ATT&CK.

Geofencing and Real Time Alert System

github.com/commonrover64/geofencing-assesment

Stack: Go, PostgreSQL, PostGIS, React

- Full stack geofencing and vehicle tracking system, built as a production assessment project.
- Built 9 REST API endpoints in Go for managing geofences, vehicles, locations, alerts, and violations.
- Implemented point in polygon geofence detection using PostGIS spatial queries with WKT polygon storage. Dockerized and deployed on Render and Netlify.

BandJam

github.com/commonrover64/BandJam

Stack: React Native, Node.js, PostgreSQL, PostGIS, Expo

- Two-sided marketplace connecting musicians with room owners for booking rehearsal spaces.
- Built a dual role system with JWT auth, where room owners onboard through email OTP verification and musicians discover and book spaces.
- Implemented PostGIS powered location search using ST_DWithin and ST_Distance, with a full booking flow including conflict detection, Cloudinary signed uploads, and Expo push notifications via FCM V1.
- Went through a full UI redesign (Catppuccin Macchiato dark theme to glassmorphism steel blue) and a complete backend rebuild.

Education

Scaler Academy, Software Development Program

2023 to Present

Doranda College, Ranchi, Bachelor of Business Administration (BBA)

2020 to 2023
