Summary

Software developer currently studying at Scaler, focused on Data Structures, Algorithms, and Full Stack Development. Built production level projects spanning geospatial systems, agentic document processing, and endpoint security tooling, using React Native, Go, Node.js, PostgreSQL, and Docker.

Skills

Frontend: React, React Native, Expo, HTML, CSS, JavaScript

Backend: Node.js, Express.js, GoLang, LangGraph, Python

Databases: PostgreSQL, PostGIS, MongoDB, MySQL

Tools: Git, GitHub, Docker, Postman, Cloudinary, Linux

Core Concepts: Data Structures and Algorithms, REST APIs, Geospatial Systems, Agentic Systems

Projects

Loan File Intelligence System ([repo](#))

LangGraph, Python

Agentic document processing system built for SuperDocs as part of a founding engineer selection task.

- Designed an agentic pipeline using LangGraph to process and validate loan files end to end.
- Built a completionValidator and bluffDetector, guarding against two bugs uncovered in the SuperDocs API.

Freelancer Engagement and Billing Bundle ([repo](#))

Node.js, Express, React, PostgreSQL

Full stack app for freelancer engagement and billing, built for the same SuperDocs selection process.

- Built a Node and Express backend with a React and Vite frontend, integrated with the SuperDocs API for automated document generation.
- Contributed to the public SuperDocs use cases repository as an open source submission, currently under review.

Guardian (github.com/commonrover64/guardian)

Python, eBPF, BCC

EDR (endpoint detection and response) sample project built as part of SOC analyst interview preparation.

- Built a Linux process monitoring tool with a /proc based polling scanner for endpoint activity.
- Extended it with eBPF, via BCC, to catch short lived processes and track exec chains for LOLBin detection mapped to MITRE ATT&CK.

Geofencing and Real Time Alert System (github.com/commonrover64/geofencing-assesment)

Go, PostgreSQL, PostGIS, React

Full stack geofencing and vehicle tracking system built as a production assessment project.

- Built 9 REST API endpoints in Go for managing geofences, vehicles, locations, alerts, and violations.
- Implemented point in polygon geofence detection using PostGIS spatial queries with WKT polygon storage; dockerized and deployed on Render and Netlify.

BandJam (github.com/commonrover64/BandJam)

React Native, Node.js, PostgreSQL, PostGIS, Expo

Practice space marketplace app connecting musicians with room owners for booking rehearsal spaces.

- Built a dual role system with JWT auth, where room owners onboard through email OTP verification and musicians discover and book spaces.
- Implemented PostGIS powered location search using ST_DWithin and ST_Distance, with a full booking flow including conflict detection and Expo push notifications.

Education

Scaler Academy, Software Development Program

2023 to Present

Doranda College, Ranchi, Bachelor of Business Administration (BBA)

2020 to 2023
