ABOUT ME

Software developer currently studying at Scaler with a focus on Data Structures, Algorithms, and Full-Stack Development. Built production-level projects using React Native, Go, Node.js, PostgreSQL, and PostGIS. Experienced in building and deploying full-stack applications with Docker, including geospatial systems and mobile apps. Strong foundation in problem-solving, clean UI design, and scalable application development. Looking for software development opportunities to contribute and grow in a production environment.

SKILLS

Frontend: React, React Native, Expo, HTML, CSS, JavaScript

Backend: Node.js, Express.js, GoLang

Databases: PostgreSQL, PostGIS, MongoDB, MySQL

Languages: JavaScript, Java, Go

Tools & Environment: Git, GitHub, Postman, Docker, Cloudinary, Linux, Mac, Windows

Core Concepts: Data Structures & Algorithms, REST APIs, Geospatial Systems, Problem Solving

PROJECTS

Geofencing & Real-time Alert System | *Go, PostgreSQL, PostGIS, React, Vite, Tailwind CSS, Docker*

Full-stack geofencing and vehicle tracking system built as a production assessment project.

- Built 9 REST API endpoints in Go for managing geofences, vehicles, locations, alerts, and violations.
- Implemented point-in-polygon geofence detection using PostgreSQL and PostGIS spatial queries.
- Designed geofence boundary storage using WKT polygon format with SRID 4326 coordinate system.
- Built a real-time alert system using polling with toast notifications on the React frontend.
- Dockerized the backend and deployed on Render with the frontend deployed on Netlify.
- Used Neon.tech cloud PostgreSQL with PostGIS extension for geospatial operations.

BandJam | *React Native, Node.js, Express.js, PostgreSQL, PostGIS, Expo*

Practice space marketplace app that connects musicians with room owners for booking rehearsal and studio spaces.

- Built a dual role system with JWT auth where room owners onboard via email OTP verification and musicians discover and book spaces.
- Implemented PostGIS-powered location search using ST_DWithin and ST_Distance for proximity-based room discovery with radius and price filters.
- Designed a full booking flow with conflict detection, an owner approve/decline system, and real-time push notifications via Expo Notifications API.
- Integrated Cloudinary direct upload with signed requests where images are uploaded client-side and the backend stores URLs in PostgreSQL array columns.
- Built the React Native mobile app with Expo targeting Android and iOS, with map-based room discovery, photo carousels, and role-based navigation.

EDUCATION

Scaler Academy

Software Development Program

2023 to Present

Doranda College, Ranchi

Bachelor of Business Administration (BBA)

2020 to 2023
